

RECYCLABLE INDUSTRY

REVITALIZING RESOURCES FOR A SUSTAINABLE FUTURE

The recycle industry is an industry where logistic efficiency is a key element because every year tons of reusable materials are wasted in logistics activities. Moreover, most recyclables are sold in big volumes so the logistics costs can stack up fast. There are a lot of facets where that efficiency can be gained, just like in the loading process, pre-carriage, or the ocean freight. There are a lot of rules and regulations that need to be followed in recycling procedures.

Skylink network acts as a control tower, monitoring & coordinating the global management of our clients' waste, which includes administrative follow-up to guarantee optimized recycling for various industries. Through this process the waste is collected and then prepared for export from different regions of the world to their desired destinations. Our logistics experts have built trust with our clients and handle each client's independent requirements for recycle management.

Specialized Services:

- Environmental – Friendly Transport Of Recyclables
- Assets Management
- Complete Visibility Throughout Logistics Process
- End To End Management Of Recyclables Transportation
- Management Of Equipment For Transportation
- Flexibility And Transparency Of Logistic Solutions
- Documentation Of Regulatory Compliance
- Sustainable Recycling Transportation Solutions
- Optimize Efficiencies And Costs By Maximizing Loads Per Route
- Safe Loading And Unloading

Types of Services:

- Reverse Logistics
- Custom Clearance
- Vendor Management
